

## The welfare of animals during transport

In the guide

Principal requirements  
Fitness of animals for transport  
Transport requirements for young animals  
Means of transport  
Space allowances (transport by road)  
Planning obligations  
Personnel  
Penalties  
Key legislation

### This guidance is for England

EU Regulation (EC) No 1/2005 *on the protection of animals during transport and related operations* (implemented in England by the Welfare of Animals (Transport) (England) Order 2006) applies to persons who transport live vertebrate animals, including farm livestock (cattle, sheep, pigs, goats, poultry, deer and horses) in connection with an economic activity (in other words, a business or trade).

Animals must be fit for the intended journey and no person must transport or cause an animal to be transported in a way likely to cause injury or undue suffering.

The Regulation does not apply to the transport of animals when not in connection with an economic activity or to the transport of invertebrate animals. However, a general duty-of-care provision exists, protecting invertebrates and animals involved in non-commercial movements from injury or unnecessary suffering.

### Principal requirements

All persons who transport animals, however far, have a duty to ensure that the animals are transported in a way that is not likely to cause injury or unnecessary suffering. They must be transported in a means of transport and under conditions that are suitable for that animal.

Farmers transporting their own animals must ensure that:

- no person transports an animal or causes animals to be transported in a way that is likely to cause injury or undue suffering
- all necessary arrangements have been made in advance to minimise the length of the journey and meet the animals' needs during the journey
- the animals are fit for the journey

- the means of transport (including the means of loading and unloading) is designed, constructed, maintained and operated so as to avoid injury and suffering and ensure the safety of the animals (see '**Means of transport**' below)
- the personnel handling the animals are trained or competent in the transport of animals
- the transport is carried out without delay and the welfare conditions of the animals can be checked during the journey
- sufficient floor area and height is provided for the animals
- the animals are watered / fed and rested at suitable intervals as necessary

## **Fitness of animals for transport**

Animals must be fit for the intended journey before the journey starts and must remain sufficiently fit throughout the journey.

Animals that are injured, weak or diseased must not be considered fit for transport, particularly if they:

- are unable to move without pain, or to walk unassisted
- have a severe open wound or prolapse
- are pregnant females for whom 90% or more of the expected gestation period has already passed, or they are females who have given birth in the previous week
- are newborn mammals in which the navel has not healed
- have been submitted to veterinary procedures in relation to farming practices such as dehorning or castration and the wounds have not completely healed

Sedatives must not be used on animals to be transported, unless under veterinary supervision.

If any animals do fall ill or become injured during transport they must be separated, given appropriate veterinary treatment and if necessary undergo emergency slaughter or killing in a way that does not cause them undue suffering.

## **Transport requirements for young animals**

Appropriate bedding must be provided for:

- piglets of less than 10 kg
- lambs of less than 20 kg
- calves less than six months old

The bedding material must provide comfort appropriate to the species and ensure adequate absorption of urine and faeces.

## **Means of transport**

The means of transport must be designed, constructed, maintained and operated so as to :

- protect the animals from pain and injury
- protect the animals from extreme temperatures and adverse changes in climatic conditions
- allow each animal adequate ventilation
- permit access to allow the animals to be inspected

The means of transport should:

- provide anti-slip flooring
- have barriers to prevent animals falling and escaping from any upper floors and lifting platforms
- provide partitions strong enough to withstand the weight of the animal
- have fittings designed for quick and easy operation

Vehicles must carry suitable equipment for loading and unloading. The vehicles' surface, including the loading and unloading equipment, must enable cleansing and disinfection between journeys. For vehicle cleansing and disinfection requirements please refer to 'Cleansing and disinfection of vehicles'.

Ramps must not be steeper than an angle of 20 degrees (36.4% to the horizontal) for pigs, calves and horses; and an angle of 26 degrees 34 minutes (50% to the horizontal) for sheep and cattle other than calves.

Where the slope is steeper than 10 degrees (17.6% to the horizontal) ramps must be fitted with a system such as that provided by foot battens, which ensure that the animals climb or go down without risks or difficulties.

## Space allowances (transport by road)

### Cattle

Category	Approximate weight (kg)	Area (m <sup>2</sup> / animal)
small calves	50	0.3 to 0.4
medium sized calves	110	0.4 to 0.7
heavy calves	200	0.7 to 0.95
medium size cattle	325	0.95 to 1.3
heavy cattle	550	1.3 to 1.6
very heavy cattle	more than 700	more than 1.6

### Sheep

Category	Weight (kg)	Area (m <sup>2</sup> / animal)
shorn sheep and lambs of 26 kg and over	< 55	0.2 to 0.3
shorn sheep and lambs of 26 kg and over	> 55	> 30
unshorn sheep	< 55	0.3 to 0.4

<b>Category</b>	<b>Weight (kg)</b>	<b>Area (m<sup>2</sup> / animal)</b>
unshorn sheep	> 55	> 0.4
heavily pregnant ewes	< 55	0.4 to 0.5
heavily pregnant ewes	> 55	> 0.5

Pigs must be able to lie down and stand up in their natural position. In order to comply with the minimum requirements, the loading density for pigs of around 100 kg should not exceed 235 kg/m<sup>2</sup>.

## Planning obligations

Before commencing a journey, transporters must ensure they have the following in place:

- necessary arrangements have been made in advance to minimise the length of the journey and meet the animals' needs during the journey (as provided in the information above)
- transport authorisations. Anyone transporting animals over 65 km (approximately 40 miles) must hold a transporter authorisation. A certificate of competence for the species being transported is required for anyone either driving or attending to the animals during transport. For more information please refer to 'Transporting livestock by road: paperwork'
- anyone transporting cattle over 50 km (approximately 31 miles) must carry an animal transport certificate. The movement of pigs, goats and sheep must always be accompanied by a movement licence. More information can be found in 'Transporting livestock by road: paperwork'. Businesses transporting livestock over eight hours must have their vehicle approved and keep a journey log
- arrangements have been made to ensure specified legal journey time limits can be met. For more information please refer to 'Farm animal transport journey times'

## Personnel

An attendant must accompany the animals, except where the driver performs the functions of an attendant. All attendants must hold a certificate of competence for the species of animals transported. When handling the animals, attendants must not:

- strike or kick the animals
- apply pressure to a particular sensitive part of the body to cause unnecessary suffering
- suspend the animals by mechanical means
- lift or drag the animals by the head, ears, horns, legs, tails or fleece
- use prods with pointed ends
- obstruct any animal being driven or led

## Penalties

Failure to comply with trading standards law can lead to enforcement action and to sanctions, which may include a fine and/or imprisonment. For more information please see 'Trading standards: powers, enforcement and penalties'.

## Key legislation

Animal Health Act 1981

EU Regulation (EC) No 1/2005 *on the protection of animals during transport and related operations*

Welfare of Animals (Transport) (England) Order 2006

Last reviewed / updated: January 2020

## In this update

General detail and tables showing space allowances added

## Please note

This information is intended for guidance; only the courts can give an authoritative interpretation of the law.

The guide's 'Key legislation' links may only show the original version of the legislation, although some amending legislation is linked to separately where it is directly related to the content of a guide. Information on amendments to legislation can be found on each link's 'More Resources' tab.
